

Banner & Bracket Installation Guide

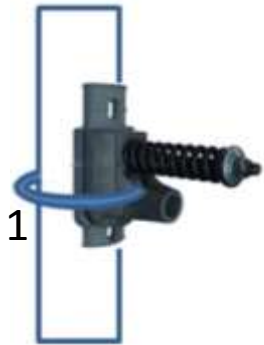

Combinations you can use for installation – It is your responsibility to make sure the structure can take the loading.

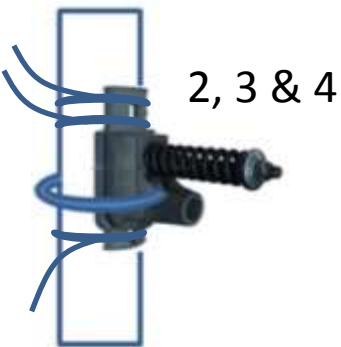

Step 1 – Install the top bracket

- 1) Put bracket at the location you want and wrap a bungee cord around the middle of the bracket to hold it in place. (Make sure Spring is on top of the Pole socket)

- 2) Put the 3 Steel Bands around the pole and over 3 slots of the bracket and tighten.

- 3) Depending on the type of fixings being used – tighten around the pole till you see that the band are tensioned and form a straight line between the pole and the bracket edge.

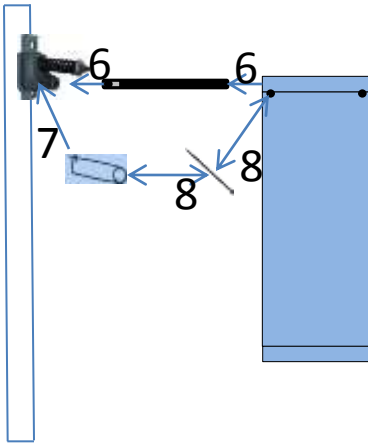

- 4) Cut off the excess of the banding if you are not likely to reuse the fixings. If you are going to reuse the banding – wrap the excess across the pole and cable tie around the existing strap.

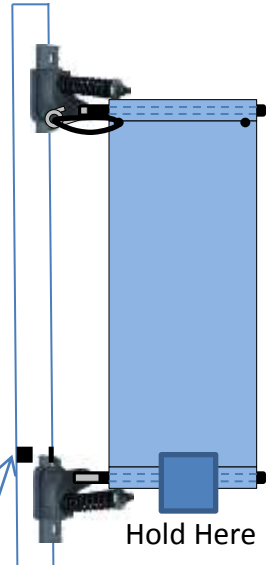

- 5) Remove Bungee

Installation Guide Page 2

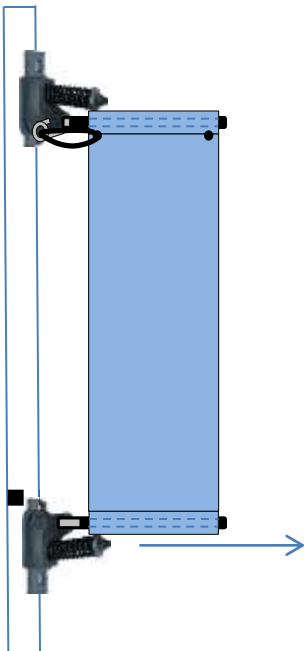

- 6) Insert the Banner into the Pole and then into the bracket. Make sure the holes on the Pole and bracket line up.
- 7) Put the Pin through the hole in the bracket and the pole and clip it on the other side
- 8) Put a cable tie through the eyelet and Circular part of the pin and cut off the excess

Mark Position

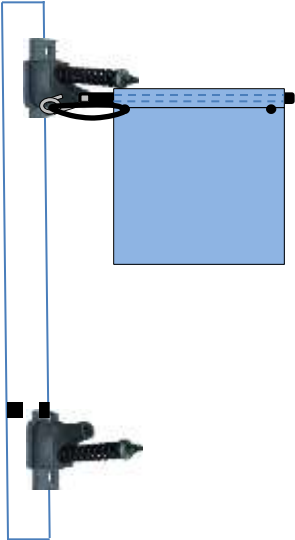

- 9) Insert the Pole in the bottom loop of the banner and in the bracket.
- 10) Holding the assembly from the middle of the banner, put against the pole and mark the position for the installation of the bottom bracket

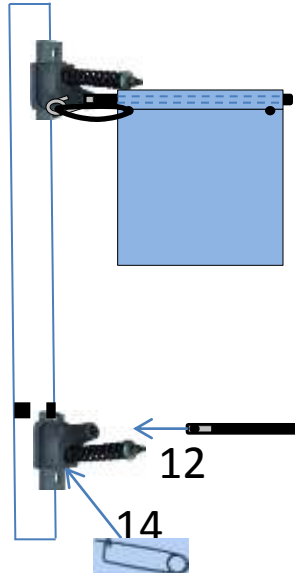

- 11) Remove Banner and Pole from the Bracket

Installation Guide Page 3

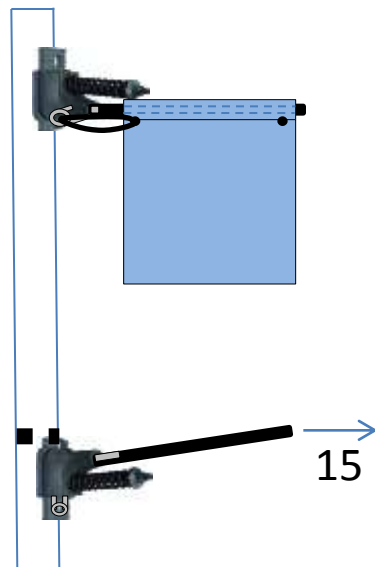

Install on marked line using Step 1 – 5,
except make sure Spring is at the Bottom

12) Insert Pole in the bracket and push upwards

13) Push Pole Upwards

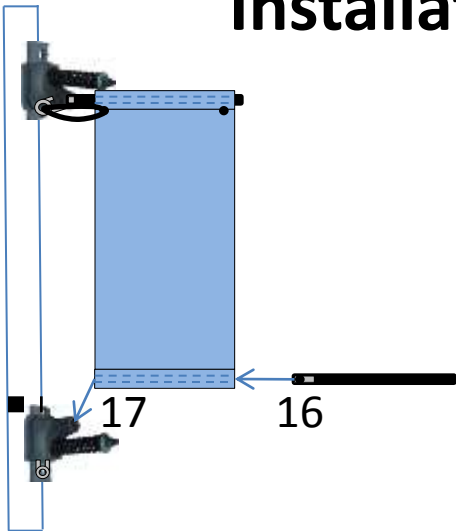

14) Insert Screw Driver / Pin between the two pcs of the bracket (this will keep the bracket held apart and the pole at an angle upwards)

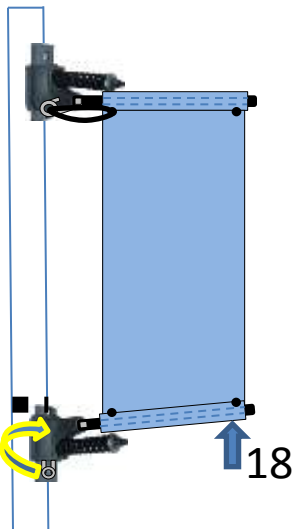

15) Remove Pole

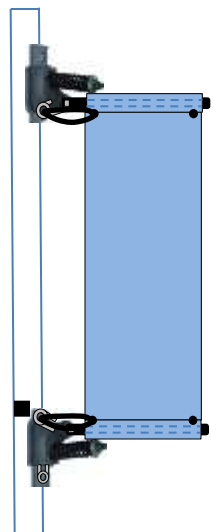

Installation Guide Page 4

- 16) Insert Pole in the Banner
- 17) Insert Pole with banner into the bracket

- 18) Push Pole Up
- 19) Remove Pin from the middle of the 2 brackets
- 20) Insert pin through the bracket and Cable tie as you did the upper bracket

Banner is now installed.

You should have tension down the middle of the banner and on both sides of the banner should be slightly loose.
